

Instructions to Run Codes

To run codes smoothly on your machine, please follow the instructions listed below:

1. Download below mentioned files from the LMS. They are available as downloadable files for the MLT-06 lecture.
 - a. ***packages-installation.html***
 - b. ***environment.yml***
2. Create a new virtual environment.
 - c. Open the Anaconda prompt and navigate to the path where you have downloaded the files mentioned in the above step. You can use the `cd <path>` command to navigate folders. Replace `<path>` with your actual path.
 - d. Follow all instructions mentioned in the ***package-installation.html*** file
 - e. Execute the following command to install additional required packages:
 - i. **`conda env update --file environment.yml`**
 - ii. **`conda install jupyter`**
3. Open Jupyter Notebook from the newly created virtual environment:
 - f. If the environment is not activated, activate it using the following command:
 - iii. **`conda activate qi-nlp`**
 - iv. **`jupyter notebook`**
